

DESIGN AND DETERMINATION

For their love, support and encouragement

Edgar Montague Little
1912-1992

and

Christopher John Little
1936-2001

Design and Determination:

The role of information technology in redressing regional
inequities in the development process

STEPHEN E. LITTLE,
Open University Business School U.K

Authors

Dr Stephen Little is Head of the Centre for Innovation, Knowledge and Enterprise in the Open University Business School Milton Keynes, U.K.

From 1999 to 2004 he chaired *Managing Knowledge*, an MBA elective delivered to students across the European Union and Central and Eastern Europe and by OUBS partners in Africa and Asia. Before joining the Open University Business School (OUBS) in 1999 he held posts at several British and Australian universities.

He left architectural practice in 1981 to pursue a PhD on the organisational impact of computer aided design at the Department of Design Research, Royal College of Art, London and returned to the U.K. in 1996 following eleven years teaching and researching information systems in Australia, based at Griffith University, Brisbane, and the University of Wollongong, NSW. He has also held visiting appointments in Australia, Europe, North America and Asia.

Dr Perry Morrison is a management and I.T. consultant and Director of Morrison Associates Pty Ltd, Darwin, Australia.

Recent consultancies include projects for Centrelink, an Australian Federal Government Department providing income support and welfare services, the implementation of digital archives in ten remote communities for the Local Government Association of the Northern Territory and the evaluation a service delivery program to three remote communities in the Northern Territory for the Darwin Community Legal Service.

He has held academic appointments with the Centre for Social Research, Northern Territory University, Darwin, Australia, the National University of Singapore, the Department of Mathematics, Statistics and Computer Science, University of New England, Armidale, NSW, and the School of Computing and Information Studies, Griffith University, Brisbane.

Dr Melih Kirlidog is an assistant professor in the Department of Computer Engineering at Marmara University, Turkey.

He holds a BSc from Middle East Technical University, Turkey, and an MBA and PhD from the University of Wollongong, Australia. He has worked as an ICT analyst and consultant for over twenty years both in Turkey and Australia. His current research interests include Decision Support Systems, intercultural ICT development and implementation, ICT in developing countries, and community informatics.

Acknowledgements

This book is concerned with new forms of adjacency and their implications for the determination of design and development. It draws on a range of research conducted across several decades and several continents with colleagues and friends. It is therefore necessary to acknowledge the complex set of networks which have supported and contributed to the ideas set out in it.

The first acknowledgement is to Perry Morrison and Melih Kirlidog, colleagues from my time in Australia, who have contributed directly to this book from the Australian Northern Territory and Turkey respectively.

My colleagues and students at the Open University (the latter spread over several continents) and from Manchester Metropolitan University in the U.K. and Wollongong and Griffith Universities in Australia will recognise many of the concerns addressed in this book. Other valuable connections date back to the Royal College of Art, London in the nineteen-eighties and Aston University in the nineteen-sixties and seventies.

A wider set of colleagues have contributed through a range of more formal networks: the Odyssey Group of organisation researchers since the late nineteen-nineties, the Asia Pacific Researchers in Organisation Studies since the nineteen-eighties and the Design Research Society since the nineteen-seventies. Some key concepts were first aired at conferences and in journals associated with these networks, in particular *Design Studies* and *Science as Culture*.

Details and links for these networks can be found at

<http://www.design-and-determination.com>

Over this period I have been engaged in research and practice dependent on the hospitality and contributions of communities from Moor Park in North East England via Musgrave Park, South Brisbane and the East End of Glasgow to Alexandra Park and Moss Side District Centre in Manchester.

More immediately the series editor, Margaret Grieco has maintained the determination needed to get the book from me and Ashgate, as publishers have shown both determination and patience

Four generations of my extended and blended family have tolerated various forms of absence due to work on this book.

None of the above share responsibility for the use made of their advice and input.

Stephen Little
Manchester, January 2004
